EDUCATION

Ontario Tech University

Bachelor of Science (Co-op), Computer Science | Third Year

Oshawa, ON

Expected April 2029

- **GPA:** 4.0 / 4.3 | Merit-based entrance scholarship for academic excellence.
- **Coursework:** Data Structures & Algorithms (Java), Object-Oriented Programming (C++), Computer Architecture & Assembly (x86), Scientific Data Analysis (Python).

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript (ES6+), HTML5, CSS3, x86 Assembly

Frameworks & Libraries: React, Vite, Tailwind CSS, Chart.js, Pandas, NumPy

Web & APIs: REST API integration, JSON, serverless functions, DOM & Browser APIs, responsive design

Tools: Git & GitHub (feature branching, pull requests), Netlify, npm, Chrome DevTools, Lighthouse, VS Code

Core CS: Data Structures & Algorithms, Big-O Analysis, OOD, Event-Driven Architecture, Async Programming, Accessibility (WCAG 2.1 / ARIA)

EXPERIENCE

Founder & Lead Developer | Swift Coaching

Solo-operated coaching business – swiftval.xyz

Remote, ON | Jul 2026 – Present

JavaScript (ES6+), HTML5, CSS3, Chart.js, Netlify

- Scaled a solo business to **\$3,000 revenue across 50+ sessions and 15 clients** at 3+ repeat bookings each, operating the full acquisition funnel on a 3,500-line zero-dependency web application.
- Engineered a scroll-driven presentation engine over an 11-scene timeline, intercepting wheel, touch, and keyboard input for inertial smoothing, crossfading, and parallax, with recursive nested-scroll delegation.
- Removed third-party single points of failure in a Chart.js projection calculator using `requestAnimationFrame`-batched rendering and live USD/CAD pricing, each behind a graceful-degradation fallback.
- Made every interactive control keyboard- and screen-reader-operable via a `prefers-reduced-motion` render path, modal focus trapping, roving-`tabindex` panels, and `aria-live` announcements.

Freelance Software Developer | SafeSeal Films

Contract engagement – safesealfilms.com

Toronto GTA, ON | Jul – Aug 2026

React, Vite, Tailwind CSS, Netlify

- Took a paying client from no web presence to a live product by architecting and deploying a production React and Vite application, converting non-technical requirements into a reusable component library on a custom Tailwind design-token system.
- Shipped accessible tabbed panels, an expandable FAQ, and a validated quote form with semantic ARIA roles and full keyboard support, backed by serverless lead capture over a REST form API.
- Implemented technical SEO for local search ranking: JSON-LD structured data, canonical tags, Open Graph metadata.

Field Technician & Sales Representative | Ontario Mosquito Control

Ontario, Canada | May 2024 – Aug 2026

- Earned Ontario MECP Water Exterminator licensure by provincial examination and returned three consecutive seasons, independently running a residential route and selling seasonal plans as the sole on-site point of contact.

PROJECTS

Attendr | Python, TypeScript, Cloudflare Workers/D1, SQLite, REST APIs | [GitHub](#)

- Built a Python and TypeScript academic assistant that aggregates Canvas assignments, announcements, and syllabi into synchronized Google Calendar events and Discord notifications.
- Automated deadline alerts, 72-hour digests, and study reminders using GitHub Actions and Cloudflare Workers executing on 5-minute cron triggers without a dedicated server.
- Designed an edge-persisted data layer with SQLite and Cloudflare D1 to track sync states and reminder statuses, ensuring automated jobs recover reliably after network interruptions.
- Integrated the Canvas, Google Calendar, Discord, and Gemini APIs to schedule conflict-free study sessions and generate automated 3-question review quizzes from course PDFs and slides.
